Metaphysics of the Unified Field of the Universe

S. H. Kaware, M. S. Modgil, D. D. Patil, H. B. Bhoir, D. N. Behera

Abstract— The Unified Field Theory has been an area of intensive research since many decades. This paper focuses on philosophy and metaphysics of unified field theory at Planck scale - and its relationship with super string theory and Quantum Vacuum Dynamic Physics. We examine the epistemology of questions such as - (1) what is the Unified Field of universe? (2) can it actually - (a) permeate the complete universe - or (b) be localized in bound regions of the universe - or, (c) extend into the extra dimensions? - -or (d) live only in extra dimensions? (3) What should be the emergent ontological properties of Unified field? (4) How the universe is manifesting through its Quantum Vacuum energies? (5) How is the space time metric coupled to the Unified field? We present a number of ansatz - which we outline below. It is proposed that the unified field possesses consciousness as well as a memory - a recording of past history - analogous to "Consistent Histories" interpretation of quantum mechanics. We proposed Planck scale geometry of Unified Field with circle like topology and having 32 energy points on its periphery which are the connected to each other by 10 dimensional meta-strings which are sources for manifestation of different fundamentals forces and particles of universe through its Quantum Vacuum energies. It is also proposed that the sub energy levels of "Conscious Unified Field" are used for the process of creation, preservation and rejuvenation of the universe over a period of time by means of negentropy. These epochs can be for the complete universe, or for localized regions such as galaxies or cluster of galaxies. It is proposed that Unified field operates through geometric patterns of its Quantum Vacuum energies - manifesting as various elementary particles by giving spins to zero point energy elements. Epistemological relationship between unified field theory and super-string theories is examined. Properties of "consciousness" and "memory" cascades from universe, into macroscopic objects - and further onto the elementary particles - via a fractal pattern. Other properties of fundamental particles - such as mass, charge, spin, iso-spin also spill out of such a cascade. The manifestations of the unified field can reach into the parallel universes or the "multi-verse" and essentially have an existence independent of the space-time. It is proposed that mass, length, time scales of the unified theory are less than even the Planck scale - and can be called at a level which we call that of "Super Quantum Gravity (SQG)".

S. H. Kaware is working as Additional Executive Engineer with the $\pm 500\text{kV}$ High Voltage Direct Current Terminal Station, Maharashtra State Electricity Transmission Co. Ltd., Mumbai, India (mobile +919769006234; e-mail: san_kaware@yahoo.co.in).

Dr. M. S. Modgil has worked as a Senior Project Associate for an Indian Space Research Organization (ISRO) project on Atmospheric Physics, at IIT Kanpur. (e-mail: msmodgil@gmail.com).

D. D. Patil has 26 years of experience in the Electrical field including 7 years of experience in the MEP side of Project Management. (e-mail: ddpatilril@gmail.com).

H. B. Bhoir is working as Researcher in Alchemy of GOD, Mumbai, India (e-mail-he.man.bhoir@gmail.com)

Keywords—super string theory, Planck scale geometry, negentropy, Super Quantum Gravity

I. INTRODUCTION

TO most of people, it is obvious that the universe is an organized unity. Whenever we look, from the innermost recesses of the atom to the far-flung galaxies, we encounter harmony and order of eternal cosmic laws. Today we know this mysterious universe governed by many well defined physical, chemical and biological laws; but there are many other deep and fundamental laws of universe which we don't know, because the knowledge of universe, its structure and operation is like an ocean. That's why Isaac Newton said that "What we know is the drop, what we don't know is the ocean!" Today many physicists and cosmologists around the world are doing the research to find out the ultimate mysteries of universe. In our present state of knowledge nature's varied phenomena required a multiplicity of different descriptions - a theory of gravitation, a theory of electromagnetism and so on. Many theoretical physicists believe, however, that underlying this multiplicity is a unified description of nature i.e. The Theory of Everything (TOE) or The Conscious Unified Field Theory of Universe from which entire universe is manifesting. Many scientists think that as per Standard Model of Physics, there may be any basic particle of all particles and a super force of all forces.

The term Unified Field Theory first time coined by Albert Einstein and he had spent around 35 years of his life on research of Unified field theory. The concept of Unified Field had been discussed by Greek Philosophers Plato, Aristotle and other scientists in previous centuries under the title of Theory of Everything (ToE) or Final Theory, Ultimate Theory or Master Theory is all encompassing.

Many theoretical physicists believed that underlying multiplicity of universe there is a unified description of nature i.e. Unified field theory (UFT) or The Conscious Unified Field Theory of Universe from which entire universe is manifesting. Nikola Tesla in his last days had tried to put up this theory under the title of Tesla's Dynamic Theory of Gravity but due to some reasons it did not presented to the world. As per this theory, the complete universe is running on gravitational energy as a fundamental energy which is produced from the source of Dynamic Gravity which is known as "Core of the Universe" which is beyond space and time.

First of all, it must be much cleared that Unified Field is nothing but Pure, Infinitely Silent Consciousness Field and it is not materialistic thing. It is an ocean of infinite indivisible motionless pure consciousness beyond space and time. This

motionless consciousness with dynamic silence through its Meta-Super-Strings produces 16 types of powers required to govern the universe. The Unified Field of universe has Novel Divine Conscious Sacred Geometry from which entire universe is manifesting. The Meta Super Strings of Unified Field are creating different energies of various frequencies through Aether vibrations which further create vibrations for creation of particles and force carriers of matter and energy by giving spins to Aether elements. Dr. John Hagelin a US theoretical Physicist [1] has carried out deep research on this theory with the help of Super String theories and found that such Conscious Unified Field of universe must be in the higher dimension of the universe with high Quantum Vacuum Energy (Aether) level of 10^{19} GeV with Infinite Silence Field of Pure Consciousness. Further all particles and forces of this nature can be represented through Unified Geometry as shown by American theoretical physicist Antony Garrett Lisi [2] who has proposed Field Theory. This theory shows that the universe is running under mechanism of Geometrical pattern of particles and forces at very high energy levels in dance of Creation from Conscious Unified Field of universe.

The Unified Field itself like an Ocean of love, peace, happiness and power etc. from which all 16 energies of universe are produced through its Sacred Geometry by mysterious pattern of Aether vibrations of different frequencies. The analysis of Unified Field can include a systematic investigation of its fundamental modes the elementary particles and forces of nature which explicitly can identify all known particles with specific vibrational states of the field. Property of love creates a cascade of Fibonacci series of harmonics frequencies which creates a cascade of Golden Mean electromagnetic waves and these vibrations given 2 spins in Aether element for creation of gravitational force to universe. Thus all properties of this Supreme Conscious Unified Field creates different energies and forces of the universe, from which entire universe is manifesting. This research paper gives explanation to the world that how this Supreme Conscious Unified Field creates these energies from its Divine Sacred Geometrical Structure at the level of Planck scale. This understanding is made possible through the latest developments in understanding of the Unified Field provided by the Meta-superstring and Aether quantum Dynamic Physics.

The universe originated with a vibration in an ocean of unmanifested fundamental substance which is described as an Ocean of Infinite Unified motionless pure Consciousness Field beyond space and time. When this motionless consciousness field becomes active, it oscillates by its own power and generates discrete quanta of consciousness which the physicists known as the discrete quanta of energy. Very low degree of manifestation of the consciousness makes the quanta appear like insentient matter. Thus the one becomes many and the laws of relativity becomes operative. The cause of the first motion is the force of Will associated with unified field of consciousness, which itself does not have any other cause. The force of Will operates on an individual scale as well as on a universal scale.

The Unified field of consciousness create universe with Super Quantum Gravity field. The universe is made up of only two things. The Unmanifest and the manifested energies.

Again these two are not two different things but only one. And this One is the singularity in SQG. This unmanifest is also the resting place of the universe, because there is no motion in it. In the reverse process, when the unmanifest begins to move, it oscillates and gives out quanta of energy which makes up all the particles of our standard model. By creation of energies, the unmanifest does not deplete and when the oscillations subside, the unmanifest does not increase. The relation between the unmanifest and the energy is like that between the ocean and its waves and also that between water and ice because energies of universe arise by condensation of the unmanifest. In physics we have Bose-Einstein condensate theory. This theory shows that new form of matter can be created by cooling bosonic atoms. Similarly all forms of matter can arise by condensation of the fundamental substance of the universe.

Our old civilizations had realized that the 5 elements of the physical world such as earth, water, fire, air, and sky which are known as five Platonic geometries are made from Aether Sacred Geometry. We had find out sacred geometry of the 5 elements such as Metatron's Cube, Flower of Life, Tree of Life and Vesica Pisces and in all old civilizations all these types of symbols were used in art works. The resonance frequency of the universe are in the form of sound of "Om" voice and the seven vowels of music created by this sacred geometry of universe. For creation of mater and its forces, the geometric structure of all 5 elements of nature interact with each among each other with Fibonacci Numbers and Golden Ratio as per sacred geometry.

Human consciousness is the main factor which affects on the Aether element and finally its reflection ultimately is on stars, planets, galaxies and each and every particle of the universe. Though the Unified Field is continuously providing the energies to run this universe but due to shifting of human consciousness and its effect on universal systems due to which they are unable to receive these energies hence this universe leads to negentropy. [5]

II. DESCRIPTION OF THE UNIFIED FIELD

The most mysterious structure of the Unified Field of the universe is as shown in figure 1. The Unified Field is nothing but Supreme Consciousness Energy Field with circle like geometry and having 32 energy points on its periphery which are the sources of unlimited and infinite energies. This field has three sub energy levels which are in combined form due to which it has pure and stable consciousness field. These three sub energy levels of the Unified Field are used for the process of creation, preservation and rejuvenation of the universe over a period of time. The most amazing thing about the Unified Field is that it has its own memory and consciousness as like each particle of the universe. This is the universal consciousness field from which all the universal processes are manifesting. There are explicitly identified all known particles with specific vibrational states of this field in the elementary particles and forces of the nature. Not only all the fundamental forces and the energies are combining at this field but also continuously generating from this field. This field is the seed of existence of all the particles and forces of universe and it is located at the 7th energy level of the universe. It is complete

Silence Pure Field (i.e. Constant Field) which is less than Planck scale in its measurement. This field can observe the past, present and future of universe. This field is beyond the time, space and matter hence it is unbounded and can easily change the time and space of universe through its energies. In this universe each and every particle has its own sacred geometry and all are working in harmony from quarks inside atom to planets. Similarly the Unified Field is also manifesting all its energies through its sacred geometry. It has its own Supreme properties and characteristics by which it can create multi universes like ours and operating them in auto process very easily at every moment. In multi universes each and every thing including all the particles are the part of Unified Field but still it is apart from them.

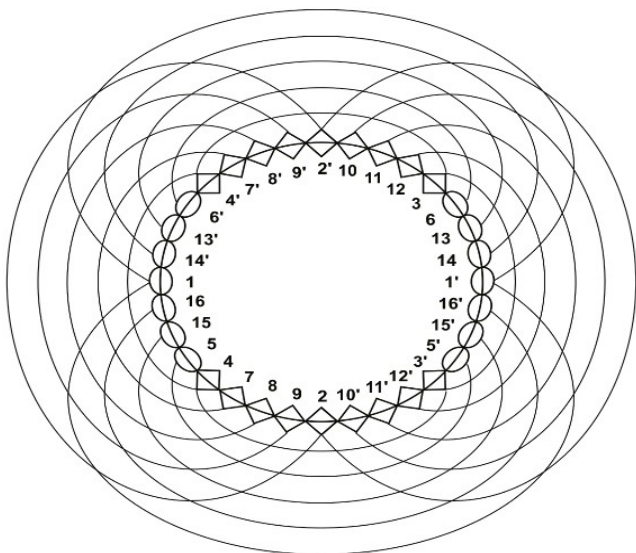

Fig. 1 Unified Field of the Universe

A. Supreme Characteristics of Unified Field of the Universe

The Unified Field has 32 energy points in which each point has its unique importance. Following are the 32 characteristics (specified in Latin Greek) of the Unified Field which are linked with 32 energy points of the Unified Field.

1. (1) It is Oceano of Caritas (i.e. Ocean of Love)
2. (1') It is Emetior of Otium (i.e. Bestower of Peace)
3. (2) It is Veritatem, Sensitivam Existo and Involveret of Beutum (i.e. Truth, the Sentiment Being, the Embodiment of Bliss)
4. (2') It is Demolior or Rejuvenator (i.e. Destroys or Rejuvenate the devilish world)
5. (3) It is Liber from Obitus (i.e. Liberator from the claws of death)
6. (3') It is Emetior of fortunates (i.e. Bestower of Happiness)
7. (4) It is Concinnator of Trinum (i.e. Trinity Creator for Creation, Preservation and Rejuvenation)
8. (4') It is Semen of Humanum Universum Arbor (i.e. Seed of human world tree)
9. (5) It is Gubernator of Cumba of Vigor (i.e. takes the boat of life across)
10. (5') It is Emetior of Salutare (i.e. Bestower of Salvation)

11. (6) It is Scient of Intium, Medium, Exitus of Gyrus (i.e. Knower of beginning, middle and end of the cycle)
12. (6') It is Amoliorer of Luctus and Emetior of fortunate (i.e. Remover of sorrow and bestower of happiness)
13. (7) It is Oceano of Tranquilitas (i.e. Ocean of Peace)
14. (7') It is Scient of Altum Philosophia of Karma Quod (i.e. Knower of the deep Philosophy of Karma)
15. (8) It is Supergradior of Deitas Universum (i.e. Sustains the deity world)
16. (8') It is Constituere of Saeculum (i.e. Establishes the Golden Age)
17. (9) It is Incorporeus (i.e. Incorporeal)
18. (9') It is Habitasse of the Aethera Elementi (i.e. Resident of the Brahm Element)
19. (10) It is Horreum of All Antiquities (i.e. Store house of all virtues)
20. (10') It is Oceano of the Nectaris of Intelligntia (i.e. Ocean of the Nectar of Knowledge)
21. (11) It is Arbiter of Divino Visum (i.e. Controller of Divine Vision)
22. (11') It Instituo of Molaris Intellectus into Divino Intellectus (i.e. Makes the stone intellects into divine intellects)
23. (12) It is Apex of Lumen and Concarnatio of Lumen (i.e. Point of Light and Embodiment of Light)
24. (12') It Instituo Hominum into Deitas (i.e. Makes human beings into highest deity)
25. (13) It is Oceano of Faustum (i.e. Ocean of Bliss)
26. (13') It is Emetior of Liberandes in Pectus Universum and Caelum (i.e. Bestower of Liberation and Liberation in Life)
27. (14) It is Remotus from Fortunates and Luctus (i.e. Detached from Happiness and sorrow)
28. (14') It is having Intempestus Forma (i.e. Timeless form)
29. (15) It is Highest on High Genitor, Praeceptor and Benedictum (i.e. Highest on high Father, teacher and preceptor)
30. (15') It is Purifico (i.e. Purifier)
31. (16) It is above Partus and Mors (i.e. Above birth and death)
32. (16') It is Emetior of Divino Intellectus (i.e. Bestower of divine intellect)

B. Supreme Qualities of the Unified Field of the Universe

Qualities of intelligence emerging from the Unified Field of Natural Law through the self-interacting dynamics of its three-in-one structure are as follows. [4]

1. (1) Unifying: At the different specific force and matter fields are unified as the different components of the underlying Superstring Field.
2. (1') Holistic (Dynamic Silence): The Lagrangian of Superstring Field Theory is the holistic expression of the Laws of Nature at the infinitely dynamic (Planck scale dynamics) and yet unexpressed (vacuum dynamics) and therefore silent level of the Unified Field; it represents the most compactified form of the constitution of the universe from the perspective of modern science.

3. (2) Reverberating Wholeness: The Lagrangian of the Heterotic Superstring quantifies the vibration of loop like closed strings.
4. (2') Transforming: The vertex for the self-interaction quantifies the transformation of a previous state into a subsequent state.
5. (3) Separating: With the progression towards larger distance scales a process of sequential symmetry breaking separates the different fields: the fields become not only different but their mutual interaction also becomes restricted.
6. (3') Structuring: The resonances in the 2-point functions express themselves as material particles; these particles in turn serve as the constituents of all composite material structures.
7. (4) Balancing-Holding together and supporting: Supersymmetry, as reflected in the Superstring Field is the perfect balance of bosonic and fermionic degrees of freedom. The holistic appearance of the Superstring Field in the functional Fourier transformation then shows how it supports and holds together all the more expressed values which are derivable from the Generating Functional.
8. (4') Offering and Creating: In the process of symmetry breaking the majority of field components become unexpressed. This 'offering' to the unmanifest makes it possible for the other components- like the quarks, leptons and the four forces to be expressed with their characteristic properties. The sequential symmetry breaking that brings forth these specific properties of the force and matter fields, etc. simultaneously can be seen as a creative process because it is responsible for the generation of the large variety found in the universe.
9. (5) Invincible and Progressive: In the process of self-interaction the superstring field may transform its superficial appearance, e.g. it's mode of vibration. This is however only the display of the progressive nature of the String Field and does not affect its invincible existence.
10. (5') Blossoming of Totality: The blossoming of the self-interacting Unified Field reveals itself most clearly in the great variety of correlation functions, which in turn uphold all expressed values in Nature.
11. (6) Flowing Wakefulness: The infinite variety of dynamic correlations as the Planck Scale show that the Unified Field is fully awake within itself. Moreover, the full propagator represents not only the aspect of flowing (propagation) but also includes self-interaction- that means wakefulness.
12. (6') Integrating and Harmonizing: All the force and matter fields are integrated as the different vibrational modes of one underlying Superstring Field. Moreover, the phase factor in the functional integral expresses harmonious superposition of all field configurations.
13. (7) Silencing, Sharing and Spreading: The vacuum dynamism hidden within the functional integral then yields the correlation functions which quantify how properties are shared and spread.
14. (7') Diagnosing: The power series expansion of the Generating Functional yields a precise diagnosis of the dynamic correlations involved in a specific process.
15. (8) Nourishing: Although the Unified Field does not appear manifestly at the level of the correlation functions, it nourishes every aspect of activity by its own self-referral dynamism hidden in the functional integral.
16. (8') Establishing: The process of sequential symmetry breaking as represented by non-vanishing vacuum expectation values establishes permanent, clearly defined characteristic properties of the specific fields.
17. (9) Measuring and Quantifying: The field operator of the Superstring Field and of any other more expressed quantum fields that are derived from the state representation of the Superstring Field, obey the quantum principle; the quanta are measured in units of the Planck constant.
18. (9') Ancient and Eternal: The time-translational invariance of the Lagrangian.
19. (10) Expressing: The Unified Field expresses itself through the process of sequential symmetry breaking and thereby unfolds a great variety of values.
20. (10') All Knowing: The prediction of all dynamic processes has its basis in the concentrated knowledge expressed by the Lagrangian.
21. (11) Unfolding: With the progression towards larger distance scales an increasing variety of aspects gets unfolded and this is due to self-interacting dynamism of the Unified Field.
22. (11') Dissolving: In scattering process incoming strings or particles are annihilated or merge into the vacuum state. This is the prerequisite for new strings or particles to emerge out of the vacuum state.
23. (12) Un-manifesting the Parts but Manifesting the Whole: At the infinitely dynamic level of the Planck scale the individual specific field components have no real lasting existence- the Lagrangian and all dynamism are only in terms of one holistic self-interacting Superstring Field.
24. (12') Transcending: The Lagrangian of the Superstring Field has its domain especially at the unexpressed transcendental level of the Planck scale.
25. (13) Lively Absolute(Living Wholeness- I-ness or Being: When the Unified Field of Natural Law expresses itself in an infinite variety of dynamic processes (lively), it does not show itself directly in any of the localized, finite activities derived from the correlation functions. It thereby maintains its absolute status. The purely self-interacting dynamics of the Unified Field gives it the quality of I-ness. It only refers back onto itself and is never transformed into anything else. It therefore has the quality of pure existence, pure being. All specific expressed fields and the variety of correlation functions are merely expressions of the dynamics of this eternally existing field.
26. (13') Equivalency: All the symmetries displayed by the Lagrangian express the equivalency between the different field components as well as the equivalency of the different space-time points.
27. (14) Distinguishing and Deciding: The self-interaction of the Superstring induces via Higgs mechanisms etc. a process of sequential symmetry breaking by which the field components become distinct. Moreover, the quantum mechanical interaction is at the center of any quantum

measurement process in which the further time evolution is decided.

28. (14') Omnipresent: The functional Fourier transformation makes the Unified Field holistically omnipresent in any dynamic process derived from the infinite variety of correlation functions.
29. (15) Analyzing: The analysis of the Generating Functional expresses itself in an infinite variety of dynamic correlations which are quantified by the specific n-point functions.
30. (15') Enlightening: The enlightenment of holistic quantum correlations in the case of macroscopic quantum coherence as quantified by respective correlation functions, connects expressed manifest levels back to the holistic value of Natural Law and thereby is enlightening.
31. (16) All Pervading Wholeness: The functional Fourier transformation shows that the Unified Field pervades everything in a holistic manner.
32. (16') Memory: The non-vanishing vacuum expectation values carry the memory of the sequential symmetry breaking.

All the 16 energies required to operate this universe are produced by the Unified Field of the Universe from its dynamic silence nature. The 32 energy points on the periphery are joined pair wise by which 16 energies are produced. The 16 energies produced from the unified field of the universe are as below.

1. Gravitational Energy (1-1')
2. Nuclear Energy (2-2')
3. Aether Energy (3-3')
4. Potential Energy (4-4')
5. Kinetic Energy (5-5')
6. Magnetic energy (6-6')
7. Mechanical Energy (7-7')
8. Electromagnetic Energy (8-8')
9. Thermal Energy (9-9')
10. Sound Energy (10-10')
11. Elastic Potential Energy (11-11')
12. Electric Energy (12-12')
13. Mechanical Work (13-13')
14. Electrostatic Energy (14-14')
15. Chemical energy (15-15')
16. Surface Energy (16-16')

As per Aether Theories, there are no particles only waves are present which is in contrast with the quantum physics. The Unified consciousness or zero point field in the Aether Quantum Dynamic is the alpha and omega of creation! The Unified consciousness field is perfect stillness and unimaginable abundant activity at the same time! They are two sides of the same coin, it's like a snake biting its own tail.

Love and Gravitational Energy -

It is known to all that gravitational energy bound all objects of universe from micro to macro level to run the universe. The spiritual energy of love can create gravitational energy which can be proved mathematically as below. Figure 2 shows, the waveforms of different emotions from the small experiment of music and emotions of human mind. [3]

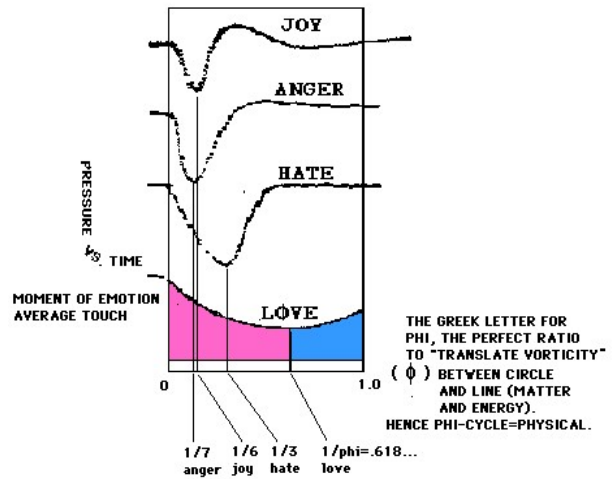

Fig. 2 Waveforms of Different Emotion [3]

The gravitational force calculated by following formula-

$$F_g = \frac{Gm_1m_2}{r^2} \quad (1)$$

Where, F_g = Force between the masses

G = Gravitational Constant ($6.674 \times 10^{-11} \text{ N (m/kg)}^2$)

m = Mass

r = Distance between the masses

The Spiritual Energies of Unified consciousness field such as Ocean of Love (Potential energy) and Bestower of Peace (Kinetic energy) which are two energies meet to produce **Gravitational energy for the universe.**

Ocean of Love represents the spiritual energy = (Energy)/ D^3

Where, D = Distance between three energies of universe (i.e. GOD, Soul and Matter)

The Potential energy is $E_p = mgh$ (2)

Where, E_p = Potential Energy

m = mass

g = Gravitational Field Strength

h = Vertical Height

Hence, Ocean of Love energy in terms of Potential energy = mgh/ D^3 and Bestower of Peace as a spiritual energy

$$= (2x t^2 x \text{ Energy})/ D^2 \quad (3)$$

Where, t = Time

d = Distance between energies.

Kinetic energy, $E_k = \frac{1}{2} mv^2$ (4)

Where, E_k = Kinetic Energy of Object

m = Mass of Object

v = Speed of Object

Hence Bestower of Peace energy in terms of Kinetic energy as = $1/2 x 2x \text{ Energy} x t^2 x V^2/ D^2$ (5)

Both Spiritual energies of Unified consciousness field such as Ocean of Love (Potential energy) and Bestower of Peace (Kinetic energy) which are two energies meet to produce **Gravitational energy for universe as below.**

Ocean of Love energy in terms of Potential energy = mgh/ D^3 and Bestower of Peace energy in terms of Kinetic energy as = $1/2 x 2x \text{ Energy} x t^2 x V^2/ D^2$

Hence, $E_{LP} \text{ Energy} = mgh/ D^3 x 1/2 x \text{ Energy} x t^2 x V^2/ D^2$

Where, h = height will be as d and Velocity will be d/ t (distance/time)

Hence, it can be written as = $(m_1gd/ D^3) x (1/2 x 2x m_2 x t^2 x V^2/ D^2)$. This will give $E_{LP} \text{ Energy} = G m_1 m_2 / D^2$ (6)

Hence both Spiritual energies of Unified consciousness field such as Ocean of Love (Potential energy) and Bestower of Peace (Kinetic energy) which are two energies meet to produce gravitational energy for universe.

This way all remaining 30 energy points, creates 15 energies to operate this universe as per description in Supreme Characteristics and Qualities of Unified Field of the Universe. So we can say that Silence field of Unified Consciousness Field of universe creates all energies for operation of universe. Entire universe getting supply of infinite power from this infinite power house every second!!

C. Mathematical Analysis of Unified Field

As Unified Field is beyond this physical world (i.e. space and time) with its Dynamic Silence producing all 16 powers infinitely on continuous basis. When these 16 powers from antimatter or Golden Luminous Aether world come to physical world then these got converted into 16 energies by Polaris star which are used in the universe for different purposes. In Electrical Engineering, the Unified Field can be compared with Constant DC Generator with infinite output as shown in figure 3 and its mathematical analysis is as below.

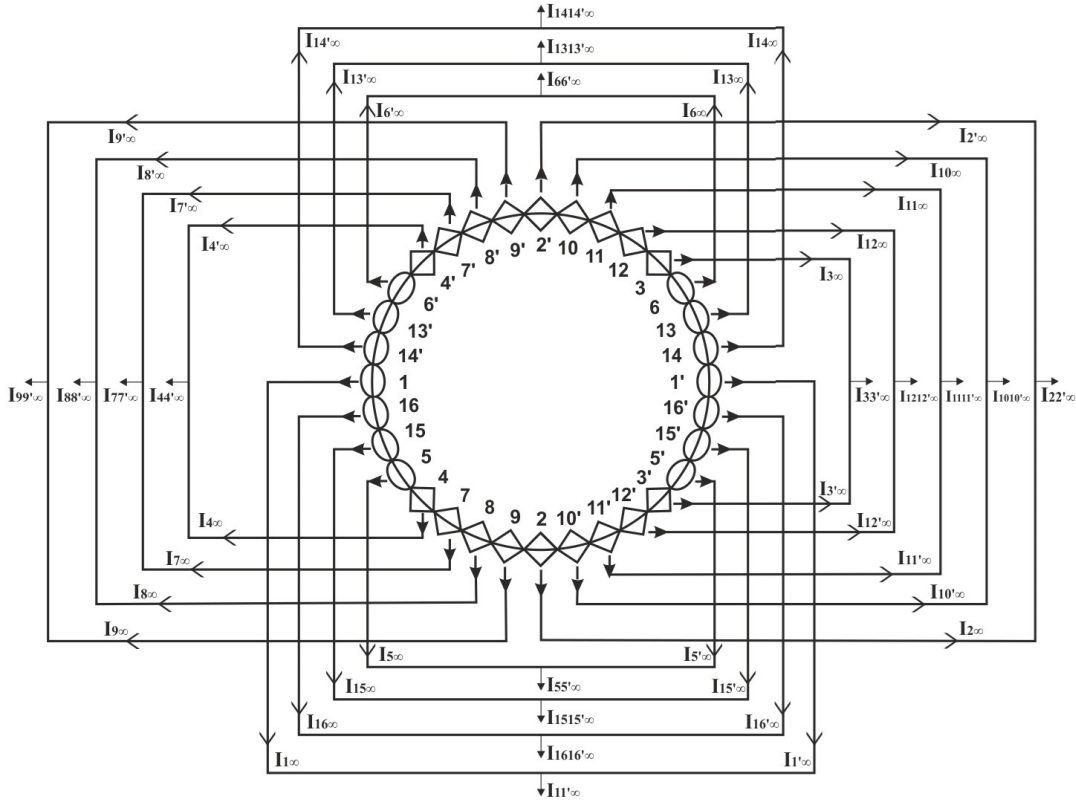

Fig. 3 Unified Field as a Constant Infinite DC Generator

The infinite power produced by the Unified Field of the universe is as below.

$$P_{\infty} = V_{\infty} \times I_{\infty} \quad (7)$$

Where

P_{∞} = Power produced by Unified Field as an Infinite DC Generator

V_{∞} = Terminal voltage of Unified Field as an Infinite DC Generator

I_{∞} = Total current produced by Unified Field as an Infinite DC Generator

As per Kirchoff's Current Law- Total current produced by Unified Field as an Infinite DC Generator

$$I_{\infty} = I_{11' \infty} + I_{22' \infty} + I_{33' \infty} + I_{44' \infty} + I_{55' \infty} + I_{66' \infty} + I_{77' \infty} + I_{88' \infty} + I_{99' \infty} + I_{1010' \infty} + I_{1111' \infty} + I_{1212' \infty} + I_{1313' \infty} + I_{1414' \infty} + I_{1515' \infty} + I_{1616' \infty}$$

Therefore, total current produced by Unified Field as an Infinite DC Generator

$$I_{\infty} = \sum_{ii'=1}^{16} I_{ii' \infty} \quad (8)$$

Hence, mathematical equations for all 16 powers produced from Unified Field of the Universe are as follows.

1. Gravitational Power: $P_{GP\infty} = V_{\infty} \times I_{11' \infty}$
2. Nuclear Power: $P_{NP\infty} = V_{\infty} \times I_{22' \infty}$
3. Aether Power: $P_{AP\infty} = V_{\infty} \times I_{33' \infty}$
4. Potential Power: $P_{PP\infty} = V_{\infty} \times I_{44' \infty}$
5. Kinetic Power: $P_{KP\infty} = V_{\infty} \times I_{55' \infty}$
6. Magnetic Power: $P_{MP\infty} = V_{\infty} \times I_{66' \infty}$
7. Mechanical Power: $P_{MEP\infty} = V_{\infty} \times I_{77' \infty}$
8. Electromagnetic Power: $P_{EMP\infty} = V_{\infty} \times I_{88' \infty}$
9. Thermal Power: $P_{TP\infty} = V_{\infty} \times I_{99' \infty}$
10. Sound Power: $P_{SP\infty} = V_{\infty} \times I_{1010' \infty}$
11. Elastic Potential Power: $P_{EPP\infty} = V_{\infty} \times I_{1111' \infty}$
12. Electric Power: $P_{EP\infty} = V_{\infty} \times I_{1212' \infty}$
13. Mechanical Work Power: $P_{MWP\infty} = V_{\infty} \times I_{1313' \infty}$
14. Electrostatic Power: $P_{ESP\infty} = V_{\infty} \times I_{1414' \infty}$
15. Chemical Power: $P_{CP\infty} = V_{\infty} \times I_{1515' \infty}$

16. Surface Power: $P_{SRP\infty} = V_{\infty} \times I_{1616\infty}$

Hence, total infinite power produced from Unified Field of the universe as a Constant Infinite DC Generator is as below.

$$P_{\infty} = V_{\infty} \times \sum_{ii'=1}^{16} I_{ii'} \quad (9)$$

D. Location of Unified Field in the Universe

In the cyclic Gödel universe, the Unified Field exactly located in the 10th dimension (i.e. 7th energy level) of the universe as shown in figure 4.

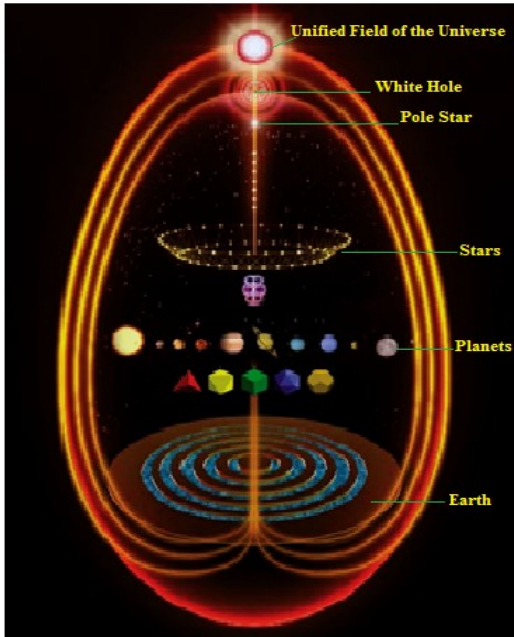

Fig. 4 Structure of Universe [6]

The to know the exact location of the Unified Field in the universe, it is necessary to know the real structure of the universe. The famous scientist Nikola Tesla said that “If you want to understand the Universe, think of Energy, Frequency and Vibration.” Hence to reveal the secrets of the universe we must have to understand the basic 3 energies, 6 frequencies and 9 vibrations of the universe. The sacred geometry of the universe is in oval shape in which the 5 elements, planetary system, stars and galaxies are enclosed.

The structure of universe is like a Yogi’s body who is doing Sadhana, in which the Cosmos is the head and all-star celestials are part of Cosmic brain, Pole Star is like hypothalamus, White hole is like crown chakra of universe, all planets are body parts like heart, lungs, liver, stomach etc. and Flat Earth is like Yogi’s legs with Earth’s core as Kundalini (i.e. Serpant) power of universe in Muladhar chakra. Beyond this marvelous universe, there is nature’s 6th element as of golden particles known as Golden Luminous Aether energy (Quantum Vacuum Energy) and in science, it is known as antimatter. Such soul world is called as Nirvandham, Shantidham and Brahmlok by Yogis. Aether energy to Pole Star whose astral link is with all the stars and galaxies of the universe by which the entire universe rotates continuously in cyclic pattern in the clock wise direction on Flat and Stationary Earth. [6]

Today scientists know only physical world of the universe and upper portion i.e. subtle and cosmic world is still unknown to them. In this universe, each and every particle completes its loop after certain period through Gödel Geometric Metric. The Rotating Gödel Universe is a complete solution to Einstein’s Field Equations. Many unsolved problems regarding physical world such as sun corona, sun neutrino problem, EPR paradox and wave function problem etc. can be satisfactorily solved by the cyclic Gödel Universe. If scientists accept the Gödel Universe Model then many secrets and wonderful geometry of the universe may get revealed.

E. Unified Field Energy Flow Network of the Universe

All 16 energies with Golden Luminous Aether form are produced from the Unified Field of the universe and passed into physical world from the cosmic world through white hole. Then, these energies processed into the Pole star (Luminous Aether) which acts as a universal processor of all energies. After processing these energies by Pole star then it flows into Saptarshi (7) stars and further processed in 108, 1008 stars to other stars in the sky element. Also there is direct energy flow from Saptarshi stars to planetary system and then to the inner core of the earth. From sky element (electrical energy) then this energy goes to air, fire, water and earth elements in the form sound, nuclear, chemical, gravitational energies respectively. When these various energies of different elements mixed in different proportion gives mechanical, thermal, electric potential, surface, magnetic, electromagnetic and electrostatic energies. The Unified Field Energy Flow Network of the Universe is as shown in figure 5.

III. CONCLUSION

The unified field possesses consciousness as well as a memory and it is nothing but Supreme Consciousness Energy Field with circle like geometry and having 32 energy points on its periphery which are the sources of unlimited and infinite energies. This field has three sub energy levels which are in combined form due to which it has pure and stable consciousness field. These three sub energy levels of the Unified Field are used for the process of creation, preservation and rejuvenation of the universe over a period of time.

It must be much cleared that Unified Field is nothing but Pure, Infinitely Silent Consciousness Field and it is not materialistic thing. It is an ocean of infinite indivisible motionless pure consciousness beyond space and time. This motionless consciousness with dynamic silence through its Meta-Super-Strings produces 16 types of powers required to govern the universe. The Unified Field of universe has Novel Divine Conscious Scared Geometry from which entire universe is manifesting. This field is the seed of existence of all the particles and forces of universe. The Meta Super Strings of Unified Field are creating different energies of various frequencies through Aether vibrations which further create vibrations for creation of particles and force carriers of matter and energy by giving spins to Aether elements. The Unified Field is like an Ocean of love, peace, happiness and power etc. from which all 16 energies of universe are

produced through its Sacred Geometry by mysterious pattern of Aether vibrations of different frequencies.

It is complete Silence Pure Field (i.e. Constant Field) which is less than Planck scale in its measurement. This field can observe the past, present and future of universe. This field is beyond the time, space and matter hence it is unbounded and can easily change the time and space of universe through its energies. In this universe each and every particle has its own sacred geometry and all are working in harmony from quarks inside atom to planets. Similarly the Unified Field is also manifesting all its energies through its sacred geometry. The Unified Field has 32 energy points in which each point has its unique importance hence for these points there supreme characteristics and qualities of intelligence emerging from the Unified Field of Natural Law through the self-interacting dynamics of its three-in-one structure are specified for proper understanding of the Unified Field. As Unified Field is beyond this physical world (i.e. space and time) with its Dynamic Silence producing all 16 powers infinitely on continuous basis. When these 16 powers from Today scientists know only physical world of the universe and upper portion i.e. subtle and cosmic world is still unknown to them. In the cyclic Gödel universe, the Unified Field exactly located in the 10th dimension (i.e. 7th energy level) of the universe.

All 16 energies with Golden Luminous Aether form are produced from the Unified Field of the universe and passed into physical world from the cosmic world through white hole.

Then, these energies processed into the Pole star (Luminous Aether) which acts as a universal processor of all energies. After processing these energies by Pole star then it flows into Saptarshi (7) stars and further processed in 108, 1008 stars to other stars in the sky element. Also there is direct energy flow of energy from Pole star and Saptarshi stars to planetary system and then to the inner core of the earth. From sky element (electrical energy) then this energy goes to air, fire, water and earth elements in the form sound, nuclear, chemical, gravitational energies respectively. When these various energies of different elements mixed in different proportion gives mechanical, thermal, electric potential, surface, magnetic, electromagnetic and electrostatic energies.

As the Unified Field is infinite in nature having unlimited and equal energy at everywhere. Hence, the Unified field has ability to manifest multiple universes with their existence independent of space and time and can be operated parallel. The Unified Field has its own Supreme properties and characteristics by which it can create multi universes like ours and operating them in auto process very easily at every moment. In multi universes each and every thing including all the particles are the part of Unified Field but still it is apart from them.

1. Mr. Santosh H. Kaware (E-mail: san_kaware@yahoo.co.in)

He did his B.E in Electrical Power System from Govt. college of Engineering, Shri. Sant Gadge Maharaj, University Amravati (India) in 2004 and M.Tech. (Power System) from Dr. Babasaheb Ambedkar Technological University, Lonere (India) in 2011. Presently he is working as an Additional Executive Engineer at +/- 500kV Bipole HVDC Terminal Station Maharashtra State Electricity Transmission Co. Ltd. (MSETCL) Padghe, Mumbai, India. He has work experience of Operations and Maintenance of 500kV HVDC terminal station and 400/220/100kV Receiving Stations, Fire Fighting System Operation and Maintenance. He has published number of papers in the field of High Voltage Direct Current (HVDC) in Electrical Engineering and Science and Spirituality at national and international level. Also his main research area is the unification of science and spirituality for welfare of humanity.

2. Dr. Moninder Singh Modgil (Email: mmodgil@gmail.com)

He did his B.Tech. (Hons.), Aeronautical Engineering from IIT Kharagpur in 1986 and Ph.D. in Cyclic Time Physics from IIT Kanpur, India in 2007. Presently he is working part time as a consultant for data analysis using Mathematica, for Provana LLC, MayurVihar, Delhi, which is a subsidiary of a company in Chicago, USA. He worked on Light Combat Aircraft (LCA) project at Hindustan Aeronautics Limited (HAL), Bangalore. Primary area of investigation of his PhD was Closed Time-like Curves (CTCs). During his PhD, Mathematica codes for theoretical physics calculations, with emphasis on General Relativity, were generated. Properties of a large number of space-times have been analyzed using these codes. He has worked as a Senior Project Associate for an Indian Space Research Organization (ISRO) project on Atmospheric Physics, at IIT Kanpur during period October 2003 to July 2004. He has published number of papers in Theoretical, Atmospheric Physics, Aeronautical Engineering and Philosophy of Science at national and international level.

3. Mr. Dnyandeo D. Patil (Email: ddpatilril@gmail.com)

He did his D.E.E. in Electrical Engineering from Bhagubhai Mafatlal Polytechnic, Mumbai in 1989, IBM Mainframe Training form DISL, Vashi in 1998. He is a Life Member of Indian Lighting Engineering Society (ILES) and Member of Indian Society of Heating, Refrigerating and Air Conditioning Engineers (ISHRAE). He is having 26 years of experience in the Electrical field including 7 years of experience in the MEP side of Project Management consisting of Design, Planning, Scheduling, Controlling and Monitoring of projects in Cost, Quality and Progress wise for high end Retail and Shopping Mall projects. He worked as Chief Engineer and Chief Manager with various organizations such as M/s. Geometric Original Design – Navi Mumbai, M/s. Aditya Birla Retail Ltd – Mumbai, M/s. Reliance Industries Ltd – Mumbai, M/s. Vibro Power Generators India Pvt. Ltd – Mumbai, M/s. GMMCO LTD – Mumbai, M/s. POWERICA LTD – Mumbai, and M/s. Sterling Switchgear Control Pvt. Ltd. – Mumbai etc. Also his main research area is the unification of science and spirituality.

4. Mr. Hemant B. Bhoir (Email: he.man.bhoir@gmail.com)

He did his B. Com., ITI in Trade of Mechanic in Machine Tool Maintenance and Diploma in Export and Import Management. He has worked with Bharat Gears Ltd. Mumbra, Mumbai as Maintenance Fitter and as Quality Inspector. His main research area is the unification of science and spirituality.

Presently all authors are working as researchers in Alchemy of GOD Research Group, Mumbai, India.
